Explanations	

As technology rapidly evolves, so does our approach to business. The needs within Logo Yazılım's product development process now require a unified approach across software development and areas such as artificial intelligence, machine learning, low-code, cloud technologies, and test automation.

To address these changes and enhance efficiency, we are reorganizing our structure by positioning all product development, analysis, test and product management teams of different business units under the Technology Group, led by the Logo Group CTO.

In this respect, we aim to :

- Integrate responsibilities within product development processes to manage end-to-end technological flow from a single point.
- Merge product management teams to bolster Logo's product strategies and increase synergy.
- Ensure our stakeholders benefit from our products and services with maximum efficiency.
- Enhance agility in product development to respond more effectively to current technological trends and market demands.
- Improve overall efficiency through the dynamic and effective use of resources with new working models, ultimately increasing the value created for all our stakeholders.

We proclaim that our above disclosure is in conformity with the principles set down in “Material Events Communiqué” of Capital Markets Board, and it fully reflects all information coming to our knowledge on the subject matter thereof, and it is in conformity with our books, records and documents, and all reasonable efforts have been shown by our Company in order to obtain all information fully and accurately about the subject matter thereof, and we’re personally liable for the disclosures.
